# About PM Mendes

## Contents

### Welcome

Expert knowledge, gained through trading in wooden panel products, timber components and doors for practically 50 years, is the foundation of our business. We maintain a strong ethical tradition, meaning that we will always attempt to do what is right and not what is expedient at the time. Our policy — applied for more than 20 years, is to deal with a carefully selected range of manufacturers with proper financial backgrounds and managements who are prepared to work to our quality standards. Personal relationships and trust ensure that the quality standards are maintained and that, if by chance any defect is found, the problem will be rectified without quibble and procedures examined to see if any improvement would eliminate or reduce the risk of a repeat. Our main storage site at Corsham, Wiltshire, is located conveniently close to the M4 motorway, enabling economic access to all areas of the country. We consider that a proper delivery service operates to customers’ requirements and not to a fixed schedule of convenience principally to us. To achieve this service level we own a fleet of 7.5 tonne trucks and vans, but also make extensive use of selected carriers to deliver throughout the UK. With these facilities a delivery lead time rarely exceeds 48 hours and can frequently be managed in 24 hours if necessary.

### Product Guarantee

We offer a 10 year guarantee from the date of delivery on most timber doors. Some doors have been excluded from the guarantee; exclusions include some Premdor products and our L&B and FL&B doors. PM-Mendes (International) Limited undertakes to repair or replace, at the option of the Company, products which are shown to be defective in materials or manufacturing workmanship within the warranty period. This guarantee is intended for the original purchaser only and does not extend to subsequent purchasers during the length of this guarantee. No claim will be approved until a site inspection has been carried out by an experienced member of staff at the discretion of the Company. In the event of goods proving defective (manufacturer’s defect only) which need replacement, our liability shall not exceed the price paid for the defective piece(s). This guarantee does not include associated charges such as labour for the removal, re-hanging or decoration of new or replacement piece(s) and/or any other works/service not originally supplied by PM-Mendes.

### Our Products Explained

We hold a range of stock that is known to be popular to the majority of consumers and, because service is paramount, our stock is considerable. If, however, we are not showing a door that you require, please do let us know as we can probably obtain it for you. Doors in this catalogue have been separated into Internal and External categories, and then grouped into popular ranges. Inevitably the names used will differ from those used by other suppliers, but we have tried wherever possible to use the most common name to describe a door by its’ characteristics.

# Internal Doors

## Internal Doors

Our internal doors are manufactured to an extremely high standard, by factories that are considered to be market leaders in providing value for money without compromising product quality. The doors are manufactured using the 'preferred' engineered construction, which ensures maximum stability. The stiles are edged with a solid timber lipping and over veneered.

We now stock a range of FSC® and PEFC certified products. Products which are FSC® certified are detailed throughout the catalogue, look out for the FSC® logo on pages which have FSC® certified products.

Unless stated otherwise, internal doors are supplied unfinished.

*N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.*

Oak Prefinished Range

Oak Prefinished Range

Our oak prefinished range of doors look great in modern and traditional styles. They are a firm favourite for both houses and commercial properties without the need for decorating on site. With designs ranging from feature or solid Oak ‘V’ grooves, ash or walnut inlays, traditional panel to a simple flush veneered door. Most of our Prefinished Oak doors are available as an FD30 fire rated door and glazed options to suit.

N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.

Traditional Raised Moulded Doors

Grey Prefinished Range

Grey Prefinished Range

Our grey prefinished range of doors are the latest addition to the Mendes portfolio. They have become very popular with modern living and commercial spaces. The grey corsica has an attractive feature ‘V’ groove, are manufactured with a real veneer that is impregnated with colour prior to being fully finished. We also offer an FD30 rated fire-door and glazed options to suit.

N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.

Walnut Prefinished Range

Our walnut prefinished range will give a stylish, warm and modern look to any home or commercial property without the need of further decoration on site. Designs from solid walnut feature ‘V’ grooves, aluminium effect inlays, to a simple flush cross directional veneered door. FD30 Fire-doors and glazed options are also available.

*N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.*

White Primed Range

White Primed Range

Our white primed range are available in both contemporary and traditional designs. They are supplied as deluxe primed – these doors only need a topcoat to be fully decorated. Available in our popular feature ‘V’ groove designs or in a flat panel shaker style. We offer a finishing service available in any painted RAL colour of your choice. FD30 Fire-doors and glazed options are also available.

The Essex door is supplied with 2 coats of factory applied white primer that allows the natural grain within the oak to show through.

N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.

Pine Unfinished Range

Our pine unfinished range will suit any traditional home and give a classic look whether clear lacquered to enhance the natural timber grain or a painted finish, in a colour of your choice. From flat panel with an attractive bead, raised & fielded panels to clear bevelled glazed options to compliment the solid panel doors. Some of our pine unfinished panelled range are also available in FD30 fire-door.

N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.

# External Doors

## External Doors

Our external oak and hardwood doors have a high specification engineered construction improving the performance of the finished product. Our doors have solid lippings in either oak or hardwood to compliment the door. Laminated timber stiles and rails not only offer stability against bowing and twisting but give the look and feel of a solid timber door with the added advantage of being stronger and a more stable product.

It is recommended that any of our external oak or hardwood doors must be protected from exposure to direct sun and rain. This is usually achieved by a porch, recess or overhang of a minimum of 1.5 metres. If this precaution is not observed, the performance and appearance of the door will not be satisfactory.

*N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.*

Oak Door & Sidelight Range

Within our wide range of external oak doors there is sure to be a style suited for every setting. From traditional to contemporary or to something a bit more special for a grand entrance. We offer solid, glazed and unglazed single and pair doors, sidelights to compliment some styles and thermal rated doors for new building regulations. All our external oak doors come unfinished for onsite finishing.

*N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.*

Redwood Range & Door Blank Range

Redwood Gates

Basic in design and traditional in appearance — but always the first choice for outbuildings or where a more traditional door design is preferred. These competitively priced doors, which are rustic in appearance, make these doors ideal for paint finishing. L&B doors are supplied with loose pinned braces for on-site handing. They are not recommended for internal use or for use as a domestic entrance door. The FL&B doors are also supplied loose pinned for on-site handing.

Door Blanks

Our external blanks are manufactured using a lightweight solid laminated timber core and faced with a thick paint grade exterior quality plywood which is ideal for paint finishing. FD30 fire rated and lipped on all four edges, (except for size 2440 x 1220mm & 2135 x 915mm) these doors can be considerably reduced in height and width. Apertures can be cut providing the aperture size, glass and bead density are in conjunction with the manufacturer’s fire certification (please check the certificate for limitations) making these doors the ideal cheap fix for your basic exterior requirements.

*N.B Please refer to care & installation guide and treatment of doors on pages 115 - 116 for additional information.*

# Bespoke Door Service

Seen  
another  
door you  
like?

Contact our sales team and we will get it priced for you, with Mendes bespoke service you are in control

## Bespoke Door Service

Mendes Bespoke is a one-stop service for all your door requirements. With our trusted custom factories in the Far East, Spain, Holland and the UK, doors can be created to your design and finished to your exact specification.

With your ideas and our experience, we can create something special for your project.

## Bespoke Door Sizes and Doorsets

### Tailored door services

#### How can we help you?

Have you seen a door from our extensive range you like, but need a different size, finish or material? We can help, simply tell us the details.

If you've found a style you like elsewhere, that you require customizing, we can often source this for you. Unsure of what may suit your decor and need guidance - with our expertise, we will help you visualise the end result.

Please contact us to discuss your door requirements further:

If you would like to speak directly to our sales team, we would be more than happy to help.

Please call: Head Office 01225 811411  
Northern Office 0151 531 1052

Alternatively email us at: [bespoke@pm-mendes.co.uk](mailto:bespoke@pm-mendes.co.uk)

Visit us at our showroom in Corsham, near Bath.  
Or download our latest brochure at:  
[www.pm-mendes.co.uk](http://www.pm-mendes.co.uk)

## Individually yours...

We can match most RAL colours

Optional finishes include:

- Veneers
- Inlays - metallic & timber
- Grooves
- Lacquer - various matt to high gloss sheens
- Glazing
- Ironmongery

HPL Door Blanks

HPL Door Blanks

HPL Door Blanks

The extra-long life and endurance of Berkvens HPL doors are due to the robust and scratch resistant high pressure laminate (HPL) sheets used for each door. The exceptionally wide range covers all project types but particularly comes into its own in the commercial, healthcare or high traffic areas, where specialist individual specifications are an important demand (Fire Rated FD30/ FD60, Antibacterial, X-Ray, Sound Insulating up to 49dB, Bullet Proof). Berkvens HPL doors can be delivered in a wide range colours, wood looks, structures or designs with or without vision panels. This makes a Berkvens HPL door a durable, practical and stylish addition to any interior.

# External Bespoke Door Service

## Bespoke Door Service

These front doors will be delivered including frame and composite threshold. Not only can you choose any colour for the final paint layer of your new door, you can even specify different colours for the inside and outside as in the example below. The doors are extra insulated with a thickness of 54mm. Each door also has a rubber seal installed. These are delivered, as standard, with clear safety extra insulated glass, however, other glazing options are available.

# Door Frames and Mouldings

## Door Frames and Mouldings

**Internal** Door Linings and Mouldings  
our internal oak door linings, architrave and skirting are of high quality, constructed with a timber core and over veneered with real oak.  
Our door linings are suitable for max door size of 2050x1000x45mm. Our door linings and mouldings come in kit form which is indicated on the opposite page. If a door lining or architrave is required for a double opening 2 kits of each would be required.

**External** Frames and Mouldings  
our external oak frames and weather bars are manufactured from solid laminated oak, over veneered with oak. The frame kits therefore combine the visual features of oak with the added strength and stability an engineered product is able to offer. Our frames come in kit form and the lengths supplied in a single frame set can be cut to suit all single doors to a maximum size of 2150x950mm. The frames are reversible to suit both inward and outward opening doors. The frames are supplied unfinished and must be fully treated with a suitable quality external wood finishing product to guarantee performance. A separate mullion is available if fitting doors and sidelights.

Our external hardwood frames and mouldings are of solid laminated timber construction which is designed to give extra stability. The frame sets are supplied un-assembled and unfinished with a reversible cill for both inward and outward opening and a plastic water bar is included in the kit to fit in the groove on the cill. Frames are also grooved to accept a weather strip which can be purchased separately.

## Internal Door Linings and Mouldings

### Internal Oak Door Linings

Product	Kit Components	Width (mm)	Thickness (mm)
Door Lining with Loose Stops	2 x Jambs (Length 2100mm) 1 x Head (Length 1050mm) Loose door stop (12x45mm)	108mm	22mm
		133mm	22mm
		133mm	32mm
		150mm	22mm

Suitable for use with FD30 doors when grooved and fitted with intumescent strip

### Internal Oak Architrave

Product	Kit Components	Height (mm)	Thickness (mm)
Architrave Modern Profile	4 x 2200mm 2 x 1100mm	69mm	18mm

### Internal Oak Skirting

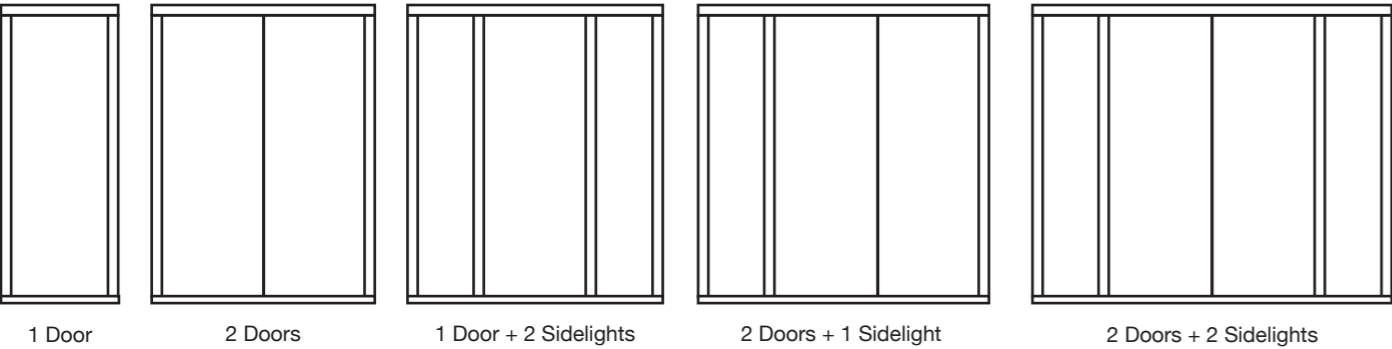

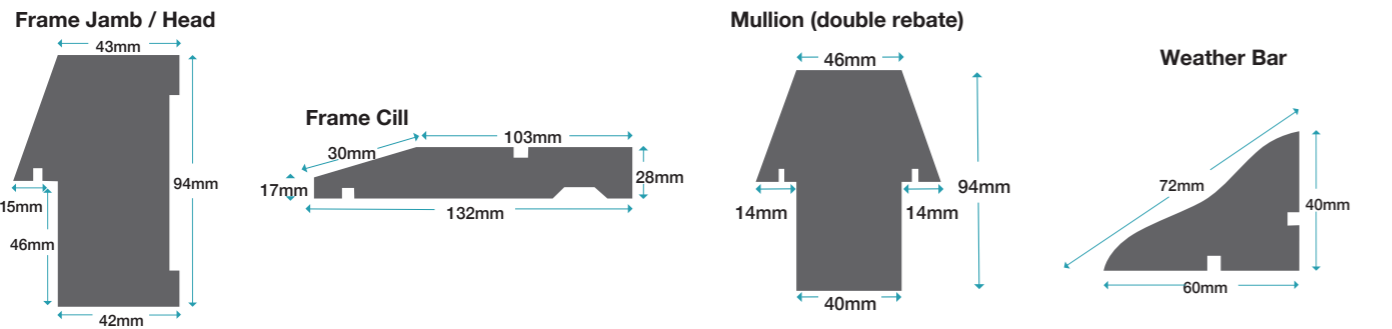

Product	Kit Components	Height (mm)	Thickness (mm)
Skirting Modern Profile	4 x 3000mm	96mm	18mm
		144mm	18mm

External Door Frames and Mouldings

External Door Frames and Mouldings

External Oak Door Frame Kit, Weather Bar and Mullion

Product	Kit Components	
Oak Single Door Frame Kit	2 x Jambs (Frame Length 2150x57x94mm)	1 x Cill (1050x132x28mm)
	1 x Head (Frame Length 1050x57x94mm)	1 x Cill Converter (1050x17x24mm)
		1 x Draught Strip
Oak Double Door Frame Kit	2 x Jambs (Frame Length 2100x57x94mm)	1 x Cill (2100x132x28mm)
	1 x Head (Frame Length 2100x57x94mm)	1 x Cill Converter (2100x17x24mm)
		1 x Draught Strip
Oak Large 2.8m Door Frame Kit	2 x Jambs (Frame Length 2100x57x94mm)	1 x Cill (2800x132x28mm)
	1 x Head (Frame Length 2800x57x94mm)	1 x Cill Converter (2800x17x24mm)

# Space Saver Door Systems

## Space Saver Door Systems

Space savers have become more popular over the years and are a simple way to increase available space in most domestic properties, particularly dining rooms, en-suite bathrooms, cloakrooms and doors into kitchens. They are also practical for most commercial buildings and outdoor use. We show a few systems within our brochure but there are many other space saving systems available upon request, for more details please contact our sales team who will be happy to help you.

# Additional Door Services

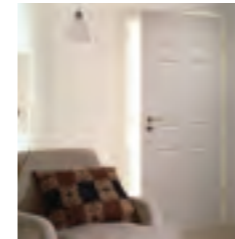

## Additional Door Services

We offer a range of additional door services to suit your needs, saving you time and on site costs. From prefinishing internal doors, aperture cutting and glazing, rebating, supply and fit intumescent for fire rated doors to door-sets which have become increasingly popular with developers.

For further information please contact our sales team on  
Corsham - 01225 811411  
Liverpool - 0151 5311052

## Additional Door Servicing Options

### Additional Door Servicing Options

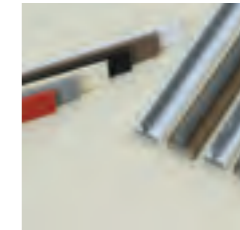

#### Internal door finishing

- Save time and site cost with pre-finished doors.
- Lacquering, priming and paint options available—call the sales team for further information.
- Professional high quality spray finish applied.
- Cut outs or trimmed areas will need to be painted after installation to ensure the product is fully sealed.

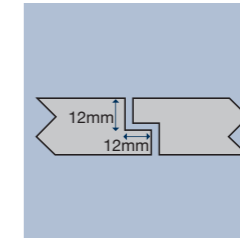

#### Aperture cutting and glazing

- An affordable way to machine and glaze apertures of your choice.
- Standard aperture option diagrams can be found on page 109.
- Bespoke aperture cutting and glazing available on most products.
- Clear, obscure, wired and fire rated glass options available.

#### Supply and fit intumescent seals to FD30 rated doors

- Standard intumescent and combined smoke seal available in various widths.
- Saves time, cost and risk of damages on-site.
- Ensures the correct seal is accurately fitted in line with the product fire certification.

#### Rebating 12mm to form a pair

- A cost effective way to accurately machine rebates.
- 12mm rebating available on most standard 35mm and some 44mm FD30 door options.
- FD30 rebating includes the correct intumescent strips to rebated meeting stiles.
- Right or left hand push or pull available—please specify when ordering.
- Remember—adding a 12mm rebate to your pair will reduce the overall width by 12mm.

### Internal Door-Sets & Screen Options

#### SpeedSet Plus & Sound Secure Door-Sets

- Adjustable door set overcoming the problem of variation within a given wall thickness.
- SpeedSet Plus is a cost effective way of fitting a door and frame.
- Rapid installation: door-sets can be installed in less than 20 minutes.
- Door supplied pre-hung with CE marked latch and hinges as standard.
- Available with Premdor's standard core, semi solid, safe 'n' sound and FD30 fire doors.
- Damage risk is reduced as SpeedSet Plus is fitted later in the building programme.

#### Sound Secure Entrance Doorset

- Specifically developed to meet the complex performance demands of apartment entrance locations.
- Sound Secure FD30 and FD60 door sets meet the requirements of all current legislation and more.
- Secured By Design as standard.
- FD30 version is supplied with a paint grade softwood frame or fully finished white Winkhauser Ecoframe.
- FD60 version available on veneer styles only. Supplied in a paint grade hardwood frame.
- Several Premdor door options available for this competitively priced door set.

### Alternative Door-Sets & Screen Options

#### Pre-hung and fully certified Door sets

- Pre-hung door sets are available in choice of veneers, laminates and fire ratings with matching architrave.
- Doors can be supplied with a wide range of standard or bespoke glazed or unglazed vision panels.
- Available with sound reducing door core specification up to 42 DB (non-fire).
- Secured By Design approved options available.
- Many widths and heights available including non standard.
- Various lock options available.
- Attractive apartment entrance door sets can also be compliant with mobility regulations.

#### Rebating 12mm to form a pair

- This range of screens can be offered from our standard design or bespoke to your requirements.
- Produced to either match or contrast your doors or door sets depending on your design intent.
- Sidelights, fanlights or borrowed lights are all available in conjunction with standard door set lead-times.
- Screens can be supplied in varying timbers although glazing certification will prevail should fire ratings be requested.
- Available finishes include paint grade, veneered or moulded skin.

# Windows

## Windows

Whether you are upgrading your original frames or restoring your home to its former glory, Mendes supply timber casement windows, sash windows and doors which will add value to your home. Combining British design with the World’s leading window technologies, the result is a range of engineered timber products packed with innovation but entirely traditional in appearance.

We pride ourselves on our commitment to providing high quality products that not only look great but are engineered to provide a long life of problem free use. Mendes product quality is endorsed with robust guarantees that are second to none in the joinery industry.

# Performance Timber Windows and Doors

## Technical Benefits

High quality paint coatings, energy efficient glazing systems and anti-warp, anti-twist timber sections are just some of the features that are ‘designed in’ as standard throughout the range. Security comes as standard too. All glass is fitted from room side to prohibit would be intruders from gaining entry by removing the panes, whilst high security locking systems secure all opening windows and doors for complete peace of mind.

Sustainability is at the heart of Mendes’ ethos. Only Timber sourced from FSC certified forests in northern Europe is used in the manufacture of these products. Our supplier is also the first timber window manufacturer in the UK to achieve a British Fenestration Ratings Council (BFRC) energy rated window back in 2005.

## Hassle-free supply of made-to-measure timber windows & doors

For more information on Performance Timber Windows & Doors contact our sales office on 01225 811411 to request a separate, more detailed brochure.

## Performance Timber Windows and Doors

### Flush Casement Windows

The traditional proportions of sash and frame make this product a favoured choice for sensitive developments and conservation areas. Modern performance expectations are met too with highly efficient double glazing units and advanced draught sealing combining to provide exceptional levels of insulation. Security is provided by means of robust multi-point locking mechanisms and, crucially, internal beading.

Flush casements which suit our entrance and French doors, giving your project total design flexibility. A wide range of styles and sizes are available which may be tailored to suit your project's requirements and specifications. With over two hundred colours to choose from and the ability to specify different shades internally and externally our range allows you to precisely determine the look you want for your home.

### Stormproof Windows

Stormproof windows feature draught stripped, rebated sashes which provide robust protection against the elements. The design, mirroring that adopted by aluminium and PVCu casements, lends itself perfectly to modern style buildings and new builds.

Our Stormproof range shares the same technological platform as our Flush Casement with highly efficient double glazing units and advanced draught sealing combining to provide exceptional levels of insulation. Security is provided by means of robust multi-point locking mechanisms and, crucially, internal beading.

A wide range of styles and sizes are available which may be tailored to suit your project's requirements and specifications. With over two hundred colours to choose from and the ability to specify different shades internally and externally our range allows you to precisely determine the look you want for your home.

### Sash Windows

Our modern sash windows faithfully emulate the lines of originals commonly found in Georgian and Victorian homes, but bring 21st century standards and warmth, weathering and performance. We also offer a modern alternative spring system which is uniquely concealed.

Careful attention to draught stripping eliminates rattles and draughts, whilst energy efficient glazing maximises solar gain and locks in heat. Sashes may be hung on traditional weights and sash cords or alternatively on neatly concealed springs. A unique easy clean system is available as an option on our traditional sash boxes, which allows the bottom sash to be tilted into the room for maintenance.

Our system allows great dimensional flexibility allowing you to tailor your sash windows to the precise requirements of your project. Slim glazing bars in a wide variety of configurations may be added as required.

### Hassle-free supply of made-to-measure timber windows & doors

For more information on Performance Timber Windows & Doors contact our sales office on 01225 811411 to request a separate more detailed brochure.

### Tilt/Turn Windows

Continental style Tilt/Turn windows are fitted with hinges that allow the sash to turn into the room from the side for ease of cleaning or tilt in from the top for controlled ventilation.

Made-to-measure Tilt/Turns are fitted with high security multi-point perimeter locking with cams and bolts to guard against jemmy attack.

The windows arrive fully factory finished in a choice of micro-porous paint or stains and are factory glazed with argon gas filled units comprising soft coat energy saving glass to give 1.1W/m<sup>2</sup>K U-value.

Externally a colour matched drip bar conceals an in-built drainage system which discharges water efficiently and guards against leaks.

### Bi-Fold and Patio Doors

Our bi-fold doors provide a highly versatile solution to open up space between house and garden. Doors stack neatly to the inside or outside in a wide range of configurations and can span an aperture of up to nine metres in width. Depending on-site conditions, a flush track may be added to form an unobstructed walkway. Importantly, each door leaf is supported at both the top and the bottom of the sash providing stability in use and longevity of performance. Horizontal sliding patio doors can be manufactured with two, three, four or six sliding panels in a variety of configurations and in a width of up to three metres per panel. High security multi-point locking mechanisms, security glazing and anti-lift out devices make them a robust barrier against forced entry. High performance paint coatings which provide maximum protection for minimal maintenance are common to the range. Bi-folds and Patios are made to measure and factory painted in a wide choice of colours to perfectly compliment your interior and exterior design.

### Entrance and French Doors

Entrance doors are available, made-to-measure, in twelve different styles and may be enhanced with a range of feature glasses modelled on authentic Victorian glazing motifs. A wide range of traditional shades or rich bold colours such as moss green, steel blue and ruby red is available. Multiple colours can be combined on the same door, enabling the inside face to be suited to your internal décor. Ironmongery can be added as required including spy holes, letter-plates, knockers and security chains.

Double opening, French doors can be made to open in or out as best suits your room layout and will suit both traditional and contemporary schemes.

All doors are hung on robust hinges and are fitted with modern, high security multi-point locking mechanisms, we are able to provide door sets that comply with Document M Mobility Access regulations.

### Hassle-free supply of made-to-measure timber windows and doors

For more information on Performance Timber Windows and Doors contact our sales office on 01225 811411 to request a separate more detailed brochure.

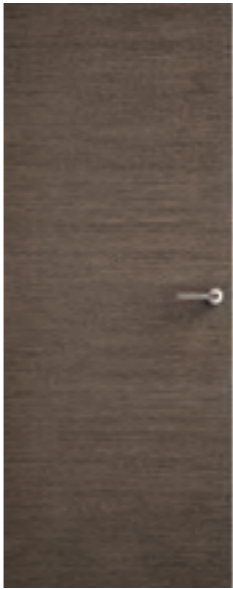

Portfolio Range

Mendes are one of the Uk’s leading distributors of Premdor products and are therefore able to offer the complete range of doors listed in the Premdor catalogue. Please contact our sales team even if the Premdor product you require is not shown on the following pages.

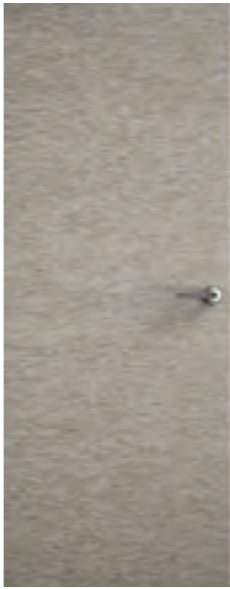

Premdor Portfolio range incorporates cutting edge Veneer Match technology which creates engineered real veneers with consistent grain and colour, offering a unique and stunning finish for a multitude of environments. Supplied with PEFC chain of custody as standard and offering a Solid core, 30 & 60 minute fire option. Glazed options are also available on request; please call our sales team for more information on

# Berkvens Range

Berkvens is a medium-sized production company with 450 employees, based in Someren, the Netherlands. Berkvens designs, develops and produces interior door systems. Founded in 1933, and currently run by the third generation of the family, and with the fourth generation having recently started as well, the company is a true family business.

Today there are 4 state-of-the-art factories in which continuous investments are made. Innovation, development and growth are in the company's DNA. The production process is characterised by a high degree of automation. The production of HPL doors for non-residential construction, designer doors for residential construction, steel frames and timber frames has completed the range and enable the company to serve all market segments.

vens  
systemen

# Berkvens Range

## HPL Colours

Berkvens HPL doors are available in a wide range of colours, structures and designs. Berkvens also collaborates with leading suppliers such as: Formica, Duropal and Polyrey, among others. An overview of the range of colours is listed below.

Because colour and design are inextricably linked, our multi-coloured EPICEdge concept can also be produced in virtually any colour. At Berkvens, we believe that every door deserves its own colour. Why should it be any different with the edge finishing? It can be a contrasting or complementary colour to the HPL. Virtually any colour request can be produced.

## Colours lacquered doors

Apart from providing a certain look and feel in a house, colour also has other effects on an interior. An industrial interior may require completely different coloursthan a rural or modern interior.

### Crystal white

Crystal white goes with virtually any interior trend and consumer request. An accessible white that is also widely used for ceilings, walls and masonry paint. Choosing doors and frames in crystal white allows you to match the rest of the interior perfectly

### Pure white

Another commonly used white is pure white. This is a white that has a slightly more yellow hue. This colour is frequently used in more traditional houses and is also popular in the renovation market..

Berkvens Range

Berkvens Range

### TCS Paint

The beautiful Berkvens designer doors are finished with TCS paint. This water-based paint used on our doors provides environmental resistance and is friendly to people and the environment. The TCS paint used for lacquer doors is sustainable and top quality. A unique and meticulous painting process ensures brilliant results that cannot be achieved with a primed door that then needs to be painted. Painting a door yourself can never achieve the same finish as these extremely sleek painted doors. And the layer of paint also provides optimum protection against scratches, stains and sunlight. Berkvens designer doors offer you years of enjoyment!

Advantages of TCS paint:

- Sleek finish
- Resistant to scratches
- Less wear
- Environmentally friendly

### Edge Finishing

When it comes to non-residential construction, it is certainly important to consider which edge finishing is the most appropriate. The different edge finishing products available have properties that impact the durability and maintenance requirements of a door, affecting the extent to which it is suitable for a particular application. Every construction project, every building, and every space requires a specific edge finishing solution. The requirements a door has to meet may involve moving beds or wheelchairs into a space, or hygiene-related aspects. In addition, the choice of edge finishing could also add balance to the overall appearance.

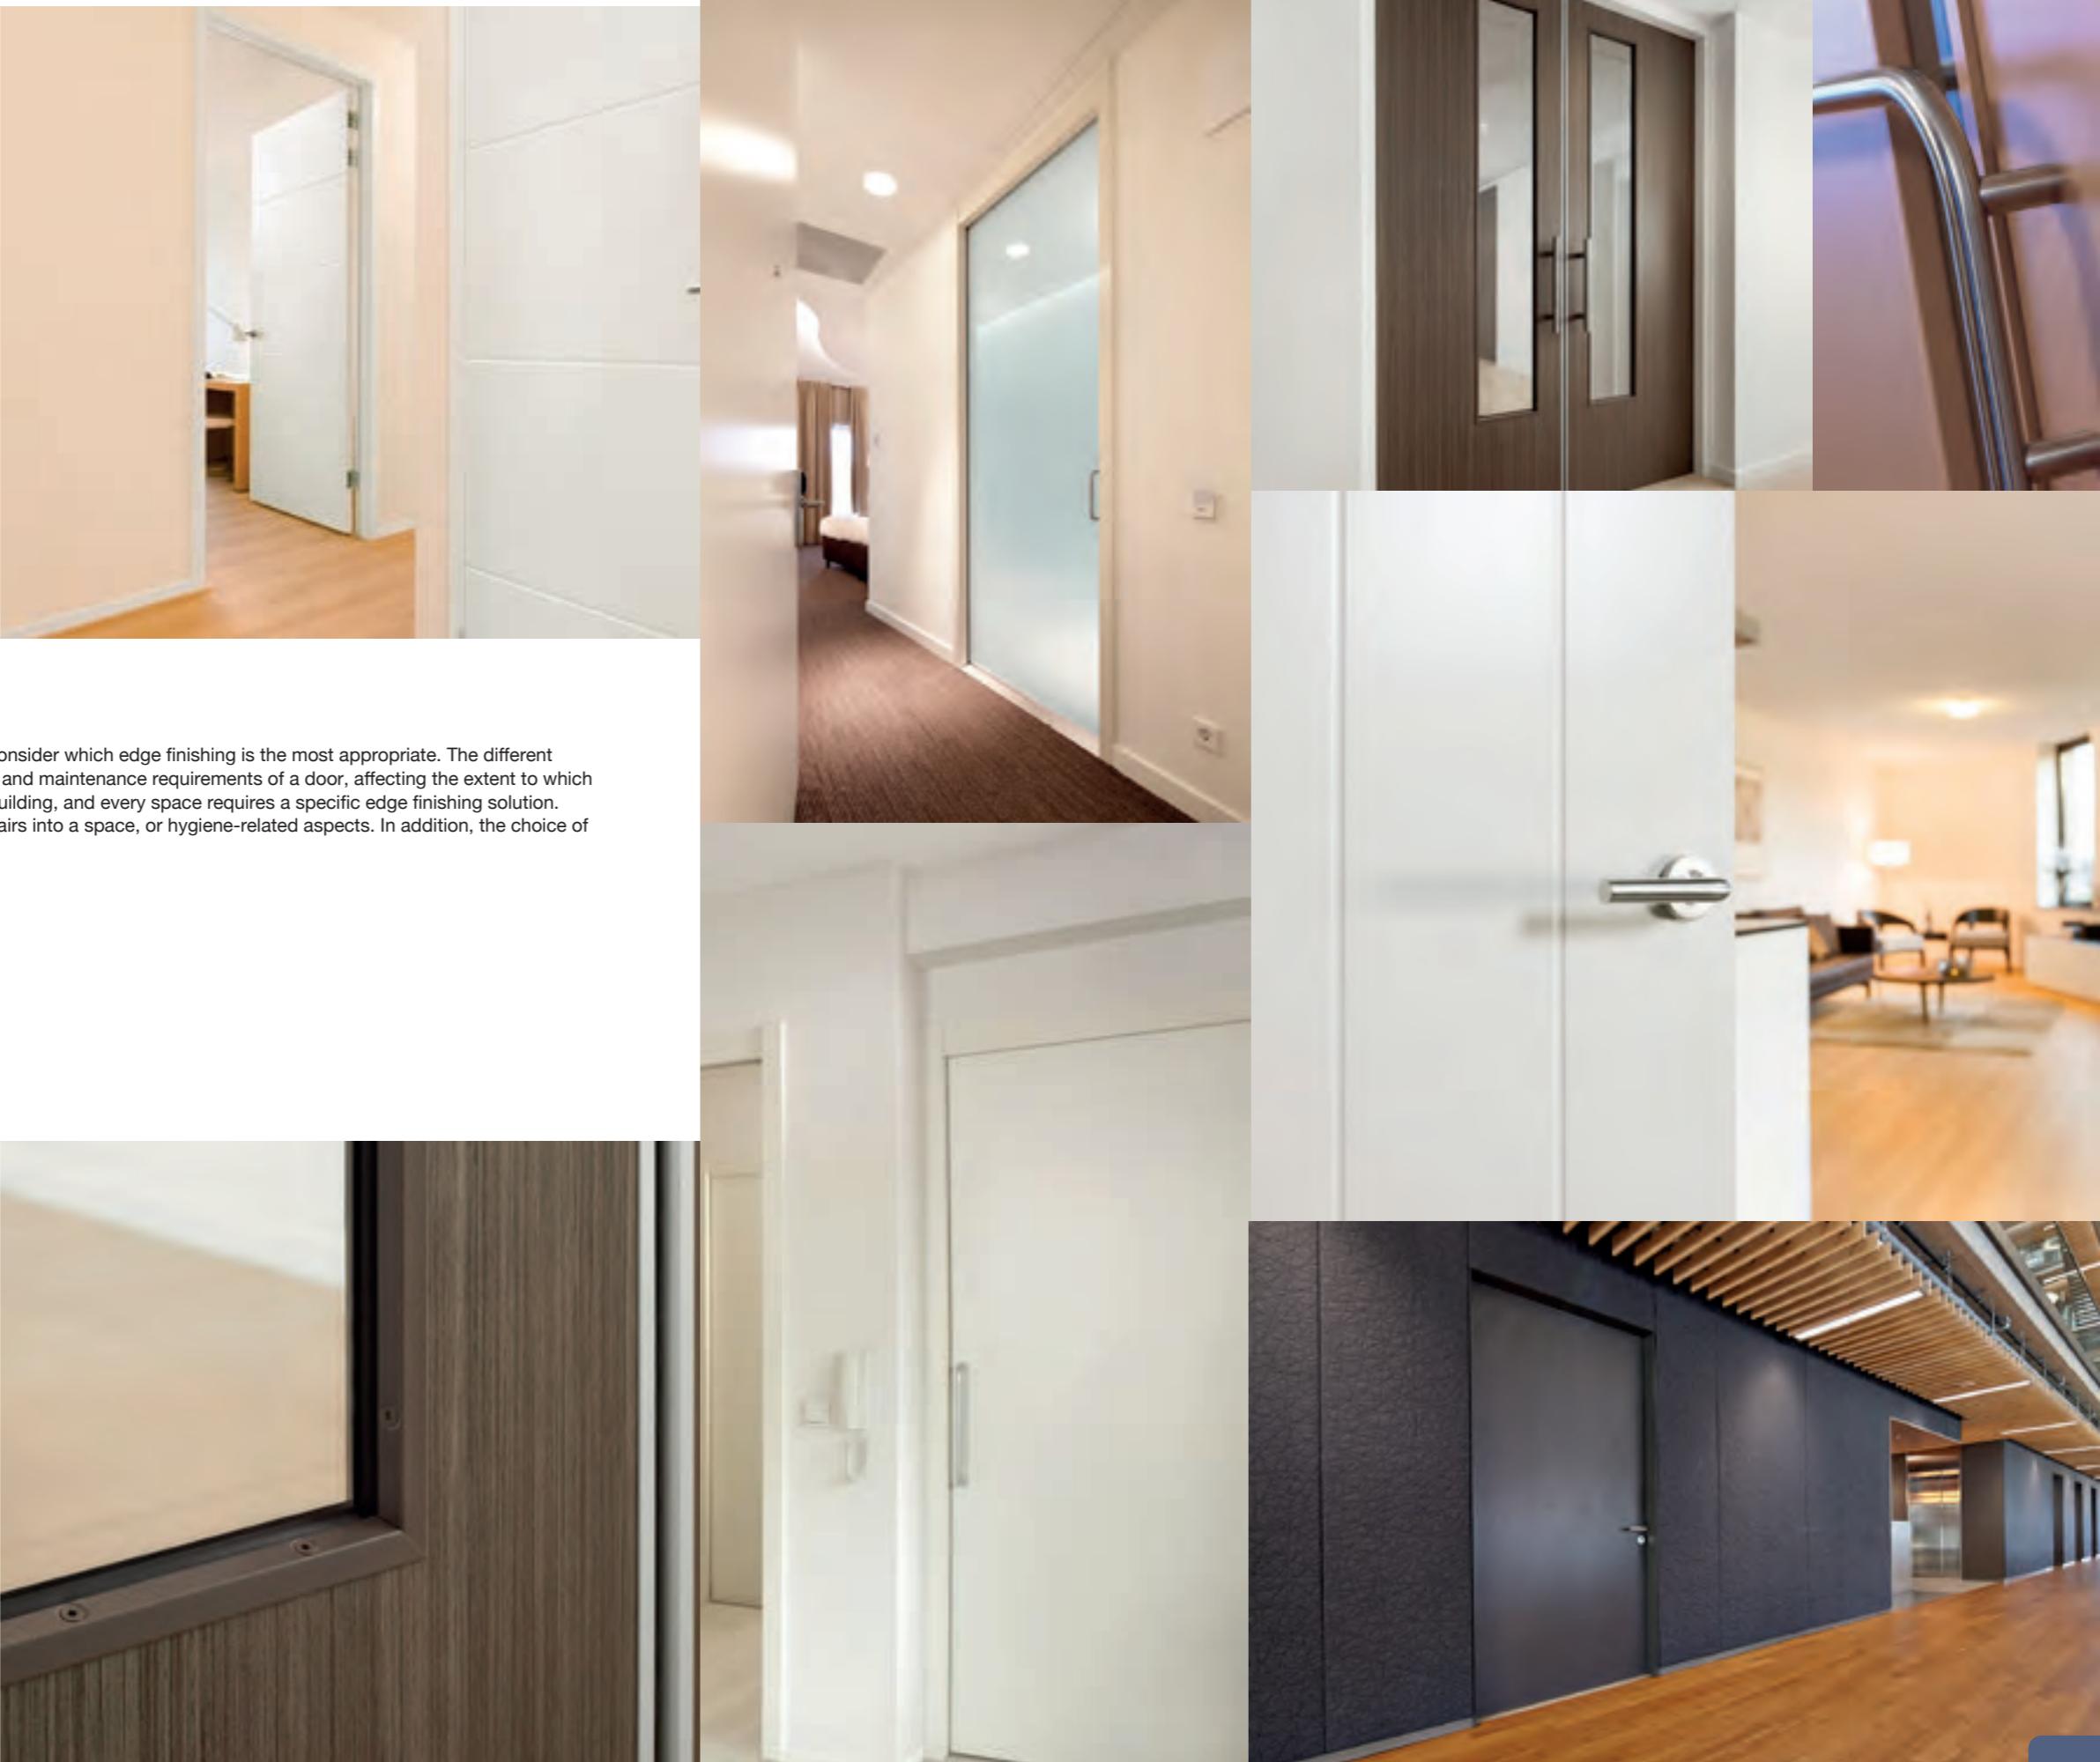

There are a number of different edge finishing variants available:

- Foilededge finishing
- Seamless moulded EPIC Edge-PUedge finishing
- EPROC -ABSadhesive edge finishing orwoodlippings.
- Environmentally friendly

### Glass Paint

Combining lippings and glass frames can create harmony or contrast in the door design. Wooden glass frames can be used for a more traditional and natural look, whereas stainless steel glass frames can create a more modern and sleeker appearance. The narrow and flat 3 mm PU glass frames can be used to achieve an ultra sleek door design.

Go for a playful contrast with an eye-catching colour for the glass frame and screws, or opt for a more harmonious effect and choose the same colour as the door leaf.

# SVEDEX Range

## SVEDEX Range

Svedex provides complete, ready to use, door kits. These fully finished door kits consist of a door leaf, including drillings for the hinges and lock, and a door frame, with hinges and strike plate already fitted at the right position. Since the surfaces of both door and frame are factory finished, all you have to do is to install the door kit, and it is ready to use.

The Svedex assortment consists of a range of standard flat doors through to style doors with lead glass, all in sleek or profiled frames. There is always a matching glass door for each style door for you to make the perfect combination. You can choose from over 250 door models and 4 frame types. In addition, our technical doors meet the highest standards in terms of fire resistance, climate class and sound insulation.

### Fully finished door kits

Svedex doors are supplied in combination with a matching frame. Both door and frame are lacquered and ready to use. Installation is easy as we include pre-mounted ironmongery and our frames are supplied with an assembly kit for installation. Important to know, is that both frame and door have the same finish, so there will be no colour differences over time. The door kits are made to measure (bespoke sizes) in our factory, so we offer a solution for almost any current dimension up to 2400mm high, also for double door situations. The regular door leaf thickness is 39mm, this also includes fire-resistant FD30 solutions.

### Available variations of functional options

- Invisible 3D hinges
- Magnetic locks
- Dropseals
- Different core options possible (tubular, solid, honeycomb, HPC)

Bespoke Door Range

About Superlak

All our doors are finished in Superlak®  
Advantages of this finish:

- No painting needed
- Glossy surface
- Resistant to scratches
- Environmentally friendly
- UV resistant
- Easy maintenance
- 10-year guarantee on the surface

Plain and flat doors

The basic range consists of a plain flat door and 2 glass doors, always equipped with safety glass. A fire resistant FD30 solution is not available in a glazed version. Finishing: the bottom of each door is sealed with hotmelt to prevent the effects of humidity.

Doors are equipped with lacquered side foil in the same colour, and with bevelled edges. As standard the doors are provided with a DIN lock with a plastic day-night bolt. In WC or key (BB) versions they have a silver metal front plate. Project locks are optionally available. The doors are provided pre - drilled for Argenta hinges, the number of hinges is dependent on type and dimensions of the door. Double door options are also possible.

Variation in Deco Design options

For almost every grooved line design door there is a matching glass door.

Different glass beadings are available in terms of colour, model and flush or not

Model CM04 detail flush glazing bar

Want to save even more time? Choose DexFix

Svedex developed DexFix for everyone who assembles Svedex frames. This enables a very fast alignment, fixing and pressure proof filling of the frame at the installation, with just a few operations. All Svedex frames can be supplied with a DexFix mounting tool. Optionally pre-assembled or supplied separately for self-assembly. DexFix provides time savings up to 25% when installing frames. More information about DexFix can be found at [svedex.com](http://svedex.com)

Deco collection

Svedex offers a versatility in different styles: modern, classic or design. Each model with its own specific features. For a complete overview of available models, we invite you to visit [svedex.com](http://svedex.com)

Sliding Doors and Systems

Svedex offers a variety of sliding door systems. Besides pocket doors and 'in front of the wall' solutions with their regular frames, we also have the Move systems are available, offering more style options. Sliding doors are possible in both single and double door systems.

Technical Doors

# Environmental Pledge

# Environmental Pledge

## FSC® and PEFC Certified chain of custody timber door supplier

PM-Mendes has successfully gained accreditation by the Forest Stewardship Council® (FSC®) and the Program for the Endorsement of Forest Certification (PEFC). This certification provides assurances that all the timber sourced for the manufacturing process of our forever growing range of FSC® and PEFC certified products, is from sustainable, legal and traceable sources. We currently hold FSC® and PEFC certified products in stock and as the demand for FSC® and PEFC certified products increase, so too will our stock holding. We are continuously working towards increasing and introducing new certified product ranges. Chain of Custody (CoC) certification is the process by which certified material can be traced from the forest to the consumer. It provides proof that the product being sold is linked to legally managed and certified products. This unbroken chain offers transparent proof that materials have been responsibly sourced. We have also taken the necessary steps to ensure we comply with the European Timber Regulation (EUTR) which means that all timber based products used in the manufacturing process of our products is legally sourced.

## Environmental Pledge

PM-Mendes has invested in facilities to segregate and re-cycle our waste and endeavour to purchase so called green options wherever possible. Our customers can be assured that any product purchased from us has made minimal contribution to the problem of global warming.

TIMBER IS A NATURAL MATERIAL AND SOME VARIATION IN THE COLOUR, GRAIN AND TEXTURE CAN OCCUR. IT IS THEREFORE OF UTMOST IMPORTANCE THAT QUESTIONS ARE RAISED PRIOR TO COMMENCEMENT OF ANY WORK OR MODIFICATIONS TO ANY TIMBER PRODUCT - NOT AFTER THE PRODUCT HAS BEEN INSTALLED. REMEMBER, ANY WORK CARRIED OUT ON YOUR PRODUCT CONSTITUTES ACCEPTANCE AND RETURNS WILL NOT BE ACCEPTED.

Preparing your timber product for Installation

Uneven expansion or contraction of component parts within a timber product is the most common reason for it to ‘fail’ or not perform satisfactorily. These movements are caused by a change in moisture level within the product and to protect against this, the timber must be fully sealed before installation as detailed in the finishing sections below. In addition please be aware of the following:

- 1. If a door needs to be trimmed it must be reduced equally from both sides. Each side of a door may be trimmed up to a maximum of 6mm for doors with a lipping 10mm or more, and 3mm for doors with a 6mm lipping. Further reductions may be possible on non fire-rated doors but please remember that this may result in exposing the engineered core which will then need to be sealed or re-lipped.
- 2. Taking more than we recommend off will invalidate the guarantee.
- 3. Avoid cutting / fitting locks or latches at a rail or glazing bar joint as this will cause weakening of the door.
- 4. We recommend the use of 3 hinges to offer more rigidity and strength.
- 5. FD30 fire rated doors must be installed in accordance with the relevant fire certificate – it is the responsibility of the person fitting the door to ensure that the intumescent strips or seals are fitted in door, frame or lining as stipulated.

Finishing & Sealing

- 1. Untreated products must be fully sealed prior to hanging – this applies to all surfaces including tops, bottoms and all recesses cut for hinges, locks, handles and letter plates etc. Waxes and oils such as Yacht varnish, Osmo Oil and Danish Oil are not considered suitable for sealing our timber products and if used will invalidate any guarantee should the timber product subsequently fail.
- 2. Please do not use a water based sealant as if applied too liberally it may penetrate the veneer and may cause bubbling to occur.
- 3. Pre finished products must be re-sealed as above in areas where timber has been exposed during alterations. White primed products should be sealed with a final top coat with particular attention paid to any areas where the priming has been removed.
- 4. To obtain the best finish lightly sand, de-nib and wipe clean all surfaces before initial sealing and before final coat is applied.
- 5. It is recommended that, when using a finishing system, the same manufacturer/brand is used for all coats. Mixing products can lead to reactions and won’t fully seal the door/frame. Doing so will invalidate the guarantee.

External Products - Additional Information

Our engineered external timber products must be protected from direct sun and rain. This is achieved by a porch, canopy or recess of ideally 1.5 metres. If this precaution is not observed the performance of the timber product will not be satisfactory and any guarantee will be surrendered.

Please note that we also cannot guarantee timber doors (both internal & external) if fitted in a location where there is a lot of heat/sunlight i.e. a glass porch. These types of locations create a greenhouse effect and puts timber doors under extreme pressure. This can cause shrinking and/or cracking.

In addition to finishing and sealing as above please be aware of the following.

- 1. We recommend a minimum of 3 coats of a suitable finishing product be applied to fully seal a door or frame.
- 2. We recommend the fitting (externally) of a weather bar at the bottom of the door.
- 3. Try to avoid painting any external timber product black (or very dark) as dark colours absorb heat making the product very hot which can lead to cracking or excessive shrinkage.
- 4. With external oak timber products please ensure that the sealant contains a UV protection element.

WARNING - If what you are applying is clear it will probably not contain UV protection.

Check with your finishing supplier before purchasing.

These External products are not suitable for coastal locations. Any property within 5 miles of a sea front is defined as being in a ‘marine environment’ and is therefore under the same kind of atmosphere and harsh environments as those directly on sea fronts. Those properties are situated in atmospheres with much higher than average organic chemical contents – higher levels of alkaline, moisture, salt and corrosive deposits from the sea - on top of that, the strong winds that the house is exposed to. All of this significantly affects the performance and lifespan of the doors in this area.

Future Maintenance

With external timber products it is impossible to advise how long the applied finish will offer protection. Much depends on the finishing product used, the facing of the timber (N, S, E or W), and how forcefully a door is opened and closed. The general rule is to ensure the product remains sealed, preventing moisture movement. If lacquer becomes cracked, scuffed or scratched, re-seal the offending part of the timber product immediately. If shrinkage lines appear around panels re-seal exposed timber immediately. Sealant around external glazing apertures can become brittle and crack if subjected to periods of high temperature; if this becomes evident re-seal with suitable clear waterproof mastic for external use. Finally, we recommend that you wash the timber product with warm water and detergent at minimum every two years, and apply a further coat of finish.

- 1. All our timber products must be kept and stored dry and flat.
- 2. All our timber products must be correctly treated without delay and prior fitting. It is most important that all timber products are completely and fully treated before fitting, including all faces, edges and any ‘cut outs’ such as letter boxes, locks etc. It is vital that the ‘end’ grain is completely protected as this is where moisture can most easily penetrate causing swelling, splitting and warping.
- 3. If the door requires trimming to fit, it should be reduced in size equally from both sides when fitting. Mortice locks fitted at rail joints can result in removal of one or more dowels or cause serious damage to a mortice, so weakening the joint. Mortice lock cavity should be kept to a minimum size and not fitted at a rail joint.
- 4. Usually 3 coats of a proprietary branded finish should be satisfactory but you should treat the door in accordance with instruction of the manufacturer of your chosen finish. Please note that waxing and/or oiling do not properly seal and are not recommended. It is also not recommended to use a waterbased system on our timber products.
- 5. As timber is a naturally grown product subject to change due to variations of humidity and temperature, we try to ensure that the timber has been prepared to make it suitable. It is obvious that we cannot know all the circumstances surrounding every situation in which our products are stored and installed, and we therefore cannot give any guarantee against shrinkage, warping or splitting.
- 6. All external timber products but particularly oak, must be protected from exposure to direct sun and rain. This is usually achieved by a porch, recess or overhang of a minimum of 1.5 metres. If this precaution is not observed, the performance and appearance of the door will not be satisfactory. Our external engineered doors are not suitable for coastal locations.
- 7. Regular maintenance of our timber products should be observed to prevent breakdown of paint film and to protect the fibre from deterioration. Please remember—the ‘finishing’ seals the timber and prevents moisture movement, the main cause of swelling and shrinkage resulting in splitting and bowing. If the ‘finish’ is not complete, or breaks down due to poor maintenance, the timber product performance will deteriorate.

Glossary Definition of Terms

**Architrave:** A decorative moulding that surrounds the door and covers the gap between the frame and the wall.

**Aperture:** An opening that is cut out of a door and fitted with glass.

**Beading:** The timber moulding which is used to fix glass into an aperture or used as a decorative finish that surrounds a panel of a solid door.

**Bespoke:** Doors that have been specially made to suit individual requirements. Customers can request special designs and sizes to match specific needs.

**Bi-Fold:** Doors which fold in half when opened and are fitted onto a track system. This type of product is particularly suitable for smaller spaces or if fitted as a pair, can be used as a room divider.

**Core Construction:** Are the materials of the internal ‘make up’ of a door.

**Door Pairs:** This is two doors which are fitted directly alongside each other in a double sized opening. Pairs can be rebated by 12mm to allow the doors to interlock when closed.

**FD30:** Products which have been tested and certified to withstand a passage of fire for more than 30 minutes.

**FD60:** Products which have been tested and certified to withstand a passage of fire for more than 60 minutes.

**Finish:** Refers to the final coat of paint or lacquer which is used to decorate a product. Doors can be supplied un-finished for on-site decoration or a specific paint/lacquer can be requested to suit individual requirements.

**Flat Panel:** The panel on a door which is completely flat and not raised or profiled.

**Frame:** The timber that covers an opening in the wall that the door is then fitted to. They are also often referred to as linings or casings.

**FSC®:** The Forest Stewardship Council is a globally recognised independent organisation that promotes forest management. FSC® Certified products offer reassurance to customers that the timbers used in the construction of the doors is from a sustainable, legal and traceable source.

**Handle Packs:** These are ironmongery sets which contain everything you need to fit your door, including handles, hinges and latch/lock mechanism.

**Handing:** This term is used when discussing pairs of doors. It refers to which door leaf will open or close first i.e. RHPO normally means ‘right hand push open’ and LHPO is used for ‘left hand push open’.

**Inlay:** A decorative strip of veneer which is normally different in colour to the face veneer. The Inlay is a design feature which is flush with the face veneer and normally in the form of vertical or horizontal lines.

**Insert:** Like an inlay, but this is normally a material which can be inserted into a groove after a door has been fully finished. Inserts are not always flush with the face veneer.

**Light:** This refers to a single pane of glass within a door e.g. a ‘4-light’ door has 4 panes of glass (or 1 pane with a glazing bead cassette giving the door a 4-light ‘look’).

**Linings/Casings:** Otherwise known as an internal door frame.

**Lippings:** These are the door edges and if they are thick enough, they can be trimmed to enable your door to fit a specific sized opening, without exposing the inner core of the door (FD30 rated doors have limitations – please check the fire certification). Lipping’s are also often rebated to allow a pair of doors to overlap at their meeting point.

**Mullion:** This is a double rebated jamb (frame upright/leg) which is required when fitting an external door with a sidelight.

**Pair Maker:** A timber moulding fitted to a door edge to create a door pair (instead of a rebate).

**Pocket Door System:** A sliding door system that is built into a wall cavity to allow the door to disappear completely once opened. A popular, modern door solution that is ideal for properties with limited space.

**Pre-Finished:** Doors that are supplied which have already had a paint or lacquer finish applied.

**Primed:** Doors that have been prepared with an undercoat ready for a top coat finish.

**Rebating:** This allows the doors to close together as a pair; - by machining a groove (rebate) into the long edges of two doors which creates an overlap where the doors meet.

**Safety Glass:** Glass that has been manufactured so that; - if it breaks, it will ‘shatter’ and will not leave long dangerous sharp shards.

**Semi-Solid Core:** The internal core of the door is part solid and part cellular components.

**Sidelight:** A panel/door which is usually fixed in position alongside a standard hinged door. A sidelight is normally used to fill a gap and allow more light to enter the room.

**Solid Core:** The Internal core of the door is manufactured using solid timber or particleboard.

**Standard Core:** The internal core of the door has cellular components. This makes the door lighter in weight than the solid or semi-solid core doors and are suitable for domestic use.

**Stile:** This refers to the side of the door. Specific terms are hanging stile (Hinge side), leading stile (Side which opens into a room) and meeting stile (Door pairs – rebated meeting stiles).

**Unfinished:** Doors that have no paint, undercoat or lacquer applied and are bare wood ready for preparation, undercoat and a top coat.

**Veneer:** A thin piece of timber used as a decorative material on the visible face of the door (i.e. Oak, Ash, Walnut etc.).

General

All orders must be confirmed in writing by the customer either by fax, post or email. Our sales contract is between the persons or customer detailed on the sales order acknowledgement and not with third party persons or customers. We shall not be held responsible for any incidental work or expenses arising out of or because of any defect in our products, or for bad workmanship. In the event of goods proving defective (manufacture defect) which need replacement, our liability shall not exceed the price paid for the defective piece(s).

Pricing

Prices quoted in our pricelist, or any other literature issued by us, are subject to alteration without notice. Unless otherwise agreed in a letter, email or facsimile by us, goods will be invoiced at prices applicable at the date of despatch. All prices are subject to VAT and this will be charged at the standard rate applying at date of despatch.

Lead -Time

Delivery lead-times quoted or advised are an estimate and should only be used as a guide. Carpenters or Joiners should not be booked until the products have arrived on-site or to the intended delivery address. We shall not be held responsible for any expenses arising due to failed deliveries within the estimated time frame. Items not normally stocked by us will be regarded as ‘specials’ or ‘to order’, which are not returnable and non-refundable. We will use our best endeavours to affect any alterations required subsequent to placing of order, but reserve the right to invoice for full payment of the original specification. Any deposit paid with order is only refundable at our discretion.

Cancellations

Any products that have been manufactured or non stock items which have arrived at the time of cancellation will be charged at the full quoted price at our discretion. Where the Company accepts orders for ‘special’ or ‘to order’ products the Company will endeavour to fulfil your requirements, but if it proves uneconomical or impractical to supply your complete order, the Company reserves the right to cancel the Contract or the remaining products outstanding. The Customer is therefore only liable to pay for the delivered products.

Delivery

All goods shall be unloaded promptly at the delivery point. Any costs arising as a result of delay to transport or for goods damaged whilst unloading will be for the account of the Purchaser. No claims for damaged or defective goods will be met unless reported at least provisionally within three working days from the date of receipt, and reported in detail within seven working days. Edge or corner damage and shortages should be noted on the Despatch Note at time of receipt. Pallets and packaging are used to protect your order from damage. This packaging forms part of your order and is not to be returned on the delivery vehicle unless prior agreement has been arranged. Returning of empty pallets or packaging on the delivering vehicle may result in charges made to the original purchaser.

Terms & Conditions of Sale

Returns

Returns and refunds may be accepted at the discretion of the company. Returns due to a customer order error or cancellation will be subject to our standard restocking/handling charge of 30% of the purchase price, and products must be returned in a perfect resaleable condition. If customers are unable to arrange the return of unwanted products, a collection charge will be applicable. ‘Specials’ and standard non stocked items will not be accepted for return. Credits will be issued after a full inspection has been carried out on the return of the product. Any returned products which are not in the original packaging and in a perfect resaleable condition will not be credited or returned to the customer.

Payments

Payment is required in full in accordance with the terms agreed at the time of opening a credit account, or with the terms stated on our Order Acknowledgement. No variation to these terms will be permitted unless specifically acknowledged in writing by us. We reserve the right to charge interest on any overdue invoices. Interest will be charged at the rate of 8% per annum over the prevailing Base Rate of HSBC Bank plc. Title of goods under these Terms & Conditions will not pass to the Purchaser until all outstanding amounts have been settled and payment has been received in full by us or by such persons as may be designated by us at the time of invoicing. Should the Purchaser sell the goods in such a way as to pass valid title to a third party, the Purchaser shall hold the proceeds of such a sale in trust for us. Notwithstanding that title to the goods shall not pass except as provided above, the goods shall be at risk of the Purchaser from the time of their collection or on delivery to an agreed destination.

Disclaimer

Whilst every effort has been made to replicate the colour of our products in this catalogue, due to printing processes, product colour cannot be matched 100%.
